Open-source with system & service

edu-sharing is based on powerful, scalable open-source technologies and can be adapted to your requirements - from the university cloud to a solution for whole countries for schools, like LOGINEO in North Rhine-Westphalia. edu-sharing provides education-adapted interfaces as well as integration interfaces to e-learning systems, authoring tools and applications such as etherpad and MediaWiki. edu-sharing complements the file management of your LMS with a powerful cloud storage. Modernize your LMS! Currently we're offering an integration for Moodle, Olat and Ilias.

Users, groups, and roles can be synchronized with school administration or campus management systems. Folder structures can be created automatically and used for schools, departments or Groups. Our service partners offer customization, integration, support, hosting and training. You'll also find the right partner for Alfresco Enterprise and Sharepoint users in our service network.
